

Navtech charting

 Navtech's charting products support customers from all sectors of aviation. Offered in both paper and electronic formats, our charting products provide accurate and up-to-date enroute and aerodrome charts in a variety of formats to suit any situation.

Navtech aerochart

Navtech aerochart is a modern, user-friendly navigation product created through years of vast charting experience combined with customer feedback. Our goal is to provide pilots with premium navigation aids onboard the aircraft.

We have used our experience and research to improve our charting products. Along with the chart name, each page is numbered and includes a frame text. A communication box has been introduced on several chart types and each chart has enhanced symbology. Navtech aerocharts have improved presentation of altitudes and presentations of take-off minima on aerodrome charts along with depictions of landing minima.

The classic AERAD product along with the Route Manual has been combined into one new and improved product. The new format was designed using research from Human Factor specialists and by gathering data from, and working closely with a number of pilots with years of experience using aeronautical charts.

Electronic aerochart

All aerochart products are available in electronic format for use in an office or in an Electronic Flight Bag (EFB). The interface is easy to use and is based on standard browser functionality. We also offer a web version of aerochart to give users access to all of the charts with an internet connection.

Multiple Chart Types

Chart types in the new specification include: Aerodrome, General, Ground, Area, Radar, SID or Departure, STAR or Arrival, IAC, Additional Landing Minima and Radar Procedures. Navtech's charting products can be customized into different packages to meet individual needs.

aerochart Features

- easy to operate
- newly designed charts with improved features
- allows quick access to charts
- fully customizable to meet the needs of any airline
- provides all pages from the traditional paper-based Route Manual, and includes your own company pages
- gives the ability to create your own portfolio of charts and documents, and store your favorite routes
- multiple chart types
- enhanced symbology
- improved presentation of altitudes

Charting your future paths.

Additional Information

Relevant frequencies on each chart in order of use

Bust altitude concept highlights the first level off altitude after departure or the first altitude to climb to after a go around

SID grouping according runway direction

Supports CDFA concept with designated DME/ALT - table

World-Wide enroute chart coverage

Navtech - formerly the Navtech and EAG group of companies - creates and supports products that provide our customers with a decisive competitive edge.

Our solutions are currently in use at over 350 airlines around the world, and directly support millions of flights each year.

Navtech has offices in Canada, Sweden and the United Kingdom and is supported by an international sales force positioned throughout the world.

Other Navtech Products

Flight Planning Solutions

Navtech's flight planning suite offers solutions to meet a wide range of operational styles and philosophies, and includes many cost-saving features such as least time, least fuel, and least cost optimization options. Navtech Flight Plan complies with regulatory requirements including FAA and JAROPS, and is supported 24/7 by a team of dedicated aviation professionals.

Crew Planning Solutions

Navtech's suite of web-based, user-friendly crew management software offers win-win solutions for both airline management and crew members.

Electronic Flight Bag Solutions

Many of Navtech's products can be configured as part of an electronic flight bag solution, including dispatch, take-off data calculation, weight & balance, and charting products.

Navigation Data Solutions

Navdata Services offers a wide variety of database management, maintenance and support services for digital navigation.

Aircraft Performance Solutions

Navtech's aircraft performance solutions include finely-tuned take-off/landing and weight & balance calculations to ensure optimum payload potential. Both modules are available in office and flight-deck (EFB) versions.

Navtech...inspired by aviation
